

Abstract

The present invention relates to pharmaceutical compositions comprising a cyclosporin as an active ingredient. It is characteristic of the compositions that choice of one or a mixture of two or more selected from the group consisting of pharmaceutical organic acids, such as medium/long chain saturated or unsaturated fatty acid and substitutive carboxylic acid as lipophilic component. For the sake of satisfying the requirement of different formulations, hydrophilic substrate can be made by added proper purified water or not. The composition is suitable for soft capsules, ointments, eye-drop, oral solution, injection and so on.
